PROCUREMENT AS A SERVICE

Procurement as a service is an outsourced procurement model that we offer. With the combination of technology, staff, and expertise we handle a portion, or all, of your organization's procurement function. Our robust ERP helps our clients see what they're spending money on, and where they will likely be able to find savings.

Our fully digitized system and the analysis therein help select the categories for sourcing and assign category experts to handle purchasing for those categories. With our system and expertise, we do the sourcing and procurement, track purchases and payments and handles three-way matching to make sure they're only paying for what they get.

All process steps are visible to our clients, through the ERP reporting portal. Our clients have unlimited access to analytics and the procurement tool so you can run your own reports, record your inventory, and upload payments.

We provide an e-procurement option that makes for more strategic sourcing and easier contract management, with focus on vendor relationships. We use technology to automate the repetitive tasks that are a time-suck and efficiency killer when done manually. We focus on analysis of spend and improved spend management to identify cost savings opportunities, and address risk management to keep things running as smoothly as possible for our clients.

We offer to meet ever increasing stakeholder expectations, and demand for analytics and market intelligence leveraging cloud base technology, professional expertise and volume aggregation. We provide the opportunity for significantly different ways to access procurement expertise focusing on flexible, modular services and commercial models that enable growth and greater value generation.

The key aspects our service offerings that engender comfort and assurance include

Service: Comprising of business processes designed with best-in-class standards, operating models, people element and Service Portfolio/ modules, backed by automation and domain expertise.

Technology: This includes the cloud and network of supporting applications, ERP platforms, and infrastructure.

Intelligence & Analytics: Analytics and intelligence form a vital aspect inbuilt into the model that enables proactive processing of data at multiple levels.

Compliance & Risk management: The compliance and risk management aspects are inbuilt into the service framework, including both service & technology aspects.
